

How are you Managing your Picketing Lines?

Dear Organizer,

Can you answer all these critical questions with a Yes?

- Are you turning your membership out consistently in numbers to be effective?
- Are you getting the visibility that your union needs in order to have the clout that is required to truly serve the needs of your membership?
- Can you effectively mobilize your membership on short notice even with limited manpower?
- Can you produce productivity reports on each picket line?

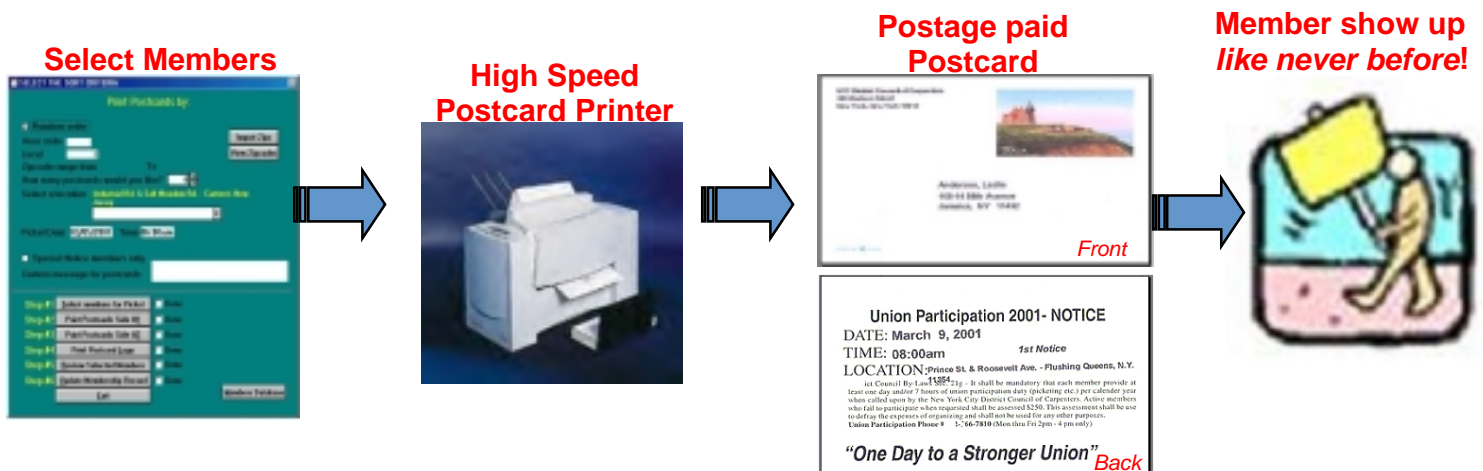

The answers to these questions are critical. If any of your answers was **No**, we can get you to **Yes!**

The Mandatory Picketing System (MPMS) is a custom written computer program designed to make managing picket activity a breeze. The system was designed to select each eligible member impartially and efficiently. It does this by:

- ✓ **Selecting members Random or,**
- ✓ **Selecting them by Local or,**
- ✓ **By Proximity to the picket site or,**
- ✓ **By Political affiliation, etc.**

Presently the system serves Locals in NY, NJ and PA, and **can be customized** to further meet your exact needs. **MPMS** is user friendly and it can be accessed concurrently from different workstations if you have a network.

Here's how the system works:

Here are some features that can be a benefit of your union:

Feature	Benefit to You
Members can be selected Randomly	Members are ensured impartial treatment during the member selection for picket duty
Members can be selected by Proximity using zip code	Imagine the ability to “tell” the system to “find me 100 members within 5 miles of the picket location.”
Postage Paid Postcard	No stamps to apply, just print and mail. Lowers cost of mailings.
Password controlled login screen with different access rights assigned	Access rights allow users to make changes (Read/Write) OR Read Only rights which only allow users to review information.
Picket Site Information Form	Provides history of all picket sites used by the system. MPMS automatically prints the current site information on the ‘Notification of Service’ postcards for each member.
History of Address Changes	MPMS tracks change of address from sources such as post office, benefits office and membership request.
Five categories of disability	Members can be omitted from picketing due to: retirement, hospitalization, military service, etc. which cuts down on mailing cost.
Notice Periods with History	MPMS tracks four different notice periods which means members are given four different opportunities to fulfill annual picket obligation.
Receipt of Service	Each member is assigned a unique receipt number as proof of service.
Levy Fines	MPMS has an optional module for enforcing fines if a member hasn’t served after receiving all four postcards notice periods.
Report Generator	The system features over 20 reports features user definable queries.
Track incentives	MPMS has an optional incentives tracking feature design to report on any “giveaways” members receive for fulfilling their picket duty.

We would be happy to give you an on-site demonstration. MPMS can be customized further to meet your specific needs. It’s user friendly (very simple to use) and features numerous checks for errors and omissions.

MPMS can be installed within one week. Install the **Mandatory Picketing Management System (MPMS)** and **Save Your Self Time Energy and Money.**
